

The health of millennials: Trends in behavioral health conditions

Published: Apr 1, 2021 - **Products & Programs** / Behavioral Health

The Blue Cross Blue Shield Association recently [published an updated study^{1\[1\]}](#) that showed a downward trend in the physical health of millennials (those born between 1981 and 1996) driven largely by behavioral health conditions. There were notable increases in major depression (12%), alcohol use disorder (7%) and tobacco and substance use disorders (5%).

Millennials with behavioral health conditions were at twice the risk of having a chronic physical condition.

The study included the analysis of millennials' medical claims over a five year period. Those with ongoing behavioral health conditions were twice as likely to have a chronic physical condition as their peers without a behavioral health diagnosis.

Behavioral health conditions driving adverse health for millennials

Condition	Years of Healthy Life Lost	Prevalence Rate per 100, 2018	1-Year Change 2017-2018	5-Year Change 2014-2018

It's important to follow-up with your patients - millennial, Gen X, Gen Z or baby boomer, who are prescribed antidepressant medications or who have been hospitalized for mental illness or substance use disorders. Not only will patients have better behavioral health outcomes, their physical health could be significantly impacted as well. Follow these HEDIS® measures for additional guidance in closing the gaps in behavioral health conditions for all ages.
